PramaanAI: feature list in simple words

What the project does

Every year, colleges ask AICTE to renew their approval. They upload documents like fire safety and land certificates. Officers check them by hand, which is slow, and fake or expired papers can slip through.

PramaanAI reads those documents, checks them, and warns the officer about problems. It shows proof for every warning. It gives each college a risk colour: GREEN (no risk), AMBER (medium risk) or RED (high risk). It also makes a list of which colleges inspectors should visit first.

The software never approves or rejects anyone. A human officer decides, and must write a reason.

Status words: **Done** = works for real. **Fake for now** = the screen can be built, but the data is made up. **To build** = not started.

---

1. For the college

Feature	What it means	Status
Login	Each person signs in as college, officer, inspector or admin	Fake for now
Start an application	Pick the year and type (renewal, more seats, name change)	Fake for now
Upload documents	PDFs, photos and the faculty list are accepted and safety-checked	To build
Recognise documents	The system says what each file is, like "fire certificate, 97% sure"	To build
Pre-check	A plain to-do list of what to fix before submitting	To build
Submit	Locks the application; the admin can reopen it once	Fake for now

2. Reading the documents

Feature	What it means	Status
Read the fields	Finds each value (dates, numbers, names) and remembers where it sits on the page	To build
Check digital signatures	Sees if a document was changed after it was signed, and shows what changed	To build
Read QR codes	Compares the QR with the printed text	To build
Read photo details	Where and when a photo was taken	To build
Read the faculty list	Turns the spreadsheet into records	To build

3. Checking with the original source

Feature	What it means	Status
Fake government sources	Pretend e-stamp, DigiLocker, CA, fire, building and AICTE systems	Done
Ask the source	Ask the right source if each document is real	To build
Six answers	Verified, mismatch, expired, pending, source down, needs manual check	To build
Source is down	The case goes to a person instead of getting stuck	To build

Feature	What it means	Status
Reuse last year	A document already verified last year is not checked again	To build

4. The five checkers (they raise warnings, called flags)

Checker	What it looks for	Status
Source checker	Source says the document is fake, expired or unreachable	To build
Authenticity checker	Edited after signing, QR mismatch, copied documents	To build
Completeness checker	Missing, unsigned or expired documents and fields	To build
Consistency checker	The same fact disagrees between documents, years or the college website	To build
Rules checker	Not enough teachers, rooms, computers or building area; photos taken far from the campus	To build

Every warning has a plain message, the proof it is based on, and the Handbook clause where it applies.

5. Rules, risk and inspections

Feature	What it means	Status
Rules in a file	AICTE norms are kept in editable files, not hidden in code	Format done, sample rules only
Evidence collection	All facts gathered with where each came from	To build
Risk score and colour	Warnings add up to GREEN, AMBER or RED	Fake for now
Inspection list	RED colleges ranked, with reasons and an on-site checklist	Fake for now
Rule editor for admin	Test a rule change before turning it on	To build

6. Officer and admin screens

Feature	What it means	Status
Review queue	All colleges, highest risk first	Fake for now
Review page	Summary, warnings with proof, verification, rules, map	Data fake, screens to build
Show the proof	Opens the document page with the exact spot highlighted	To build
Accept or dismiss	Officer decides each warning and must write a reason; there is no reject button	Fake for now
Alerts	Missing info, expiring documents, suspicious findings	Fake for now
PDF report	A full report with the proof images	To build

7. Safety and trust

Feature	What it means	Status
Each user sees only their data	Colleges see only their own application	Fake for now
Tamper-proof history	Every action is logged in a chain that shows if anyone altered it	Fake for now

Feature	What it means	Status
Document viewing log	Who opened which document	To build
Extra login step	Code from a phone app, for officers and admins	To build
Only invented data	All names, colleges and sources are fake and labelled	Done

---

What exists today

- A test set of three made-up colleges. A is clean, B has two problems, C has many hidden problems such as a land record edited after signing, 12 duplicate teachers and a copied photo.
- Real digitally signed PDFs, so the signature checking will be genuine.
- The fake government sources, the shared data shapes, and a pretend API for the frontend.
- A list of what each checker must catch, used to measure accuracy.

What comes next

Upload and reading the documents, then the five checkers, then risk scoring and the real screens.
